Students' reviews

Evgeniya Yastrebova , 2nd year student of the major " Global Education"

What I like most of all about my major is the amazing teaching staff. All of them are very responsive, attentive and, of course, professional. Also, this major provides a unique opportunity to make professional contacts abroad. Minin university enlarges its international cooperation and this gives students chances to study abroad and continue their education in foreign universities. And, of course, this major enables us to communicate with people from all over the world and that is extremely important when you work with foreign languages.

Nikolay Sidnev, 1st year student of the major " Global Education"

I really like this program because it helps you not only to become an English language teacher, but also a very successful specialist in the sphere of international education. Also, I'm really impressed with the technical equipment of the university. All of our teachers are real professionals who are very kind, helpful, responsive. And it's important that they always try to find individual approach to each student.

Experts' reviews

Sergey Zlobin, Minister of education, science and youth policy of the Nizhny Novgorod Region:

I would like to highlight the importance of program “Global Education” for the educational system of both the Nizhny Novgorod region and the Russian Federation in general. In fact, we urgently need specialists that will be able to promote our education, that is really one of the best in the world; that will be able to package and present it on the global scale, creating an image of a highly effective educational system.

Ms. Olga Kim, head of the “Lingua Academy” Private Language Center

This major is taught in English and trains unique specialists who are ready, capable, and most importantly want to work in the world of universal globalization, in conditions when educational landscape is one for all, when we understand tasks that we work with and don't divide them into “ours” and “foreign”. We have knowledge about educational systems of other countries and it helps to form unique competencies of specialists who will work in a global educational space.
